1. Executive Summary

A web-based SaaS platform for creating, customizing, and sharing digital wedding invitations. Targeting Indonesia first, with potential SEA expansion. Key differentiators: deep adat/traditional template coverage, WhatsApp-native sharing, live preview wizard, and affordable IDR pricing.

Market Opportunity

- Global online invitation market: \$1.2B (2023) -> \$2.1B by 2030 (CAGR 8.3%)
- Indonesia estimated potential: Rp 500 billion (2025)
- Smartphone penetration 77% + eco-conscious couples driving digital shift
- WhatsApp dominant in Indonesia - no global competitor supports it natively

2. Problem Statement

Indonesian couples want beautiful, shareable digital invitations but face:

- Global platforms (Canva, Paperless Post) have zero Indonesian/adat templates
- Local competitors lack self-serve customization wizard and live preview
- Freelance custom invitations cost Rp 500K-2M with slow turnaround
- 70%+ Indonesian users are mobile-first, but existing platforms have poor mobile UX
- No WhatsApp-native sharing workflow on any existing platform

3. Goals & Success Metrics

Business Goals

- 1,000 paying invitations within 6 months of launch
- Rp 50M Monthly Recurring Revenue within 12 months
- 70%+ mobile traffic share

Product Goals

- Time to first published invitation: under 10 minutes
- RSVP open rate: above 60% (vs email industry average 25%)
- Net Promoter Score: above 50

Technical Goals

- 99.9% uptime during active invitation periods
- Page load under 2s on 4G mobile
- Zero critical security vulnerabilities at launch

4. Competitor Analysis

Global Players

[Global] Paperless Post

Price	\$0 free + \$8-\$75 coin packs / \$150/year unlimited
Strength	Polished UI, tracking, paper add-on, 500+ templates
Gap	No Indonesian/Islamic templates, no WhatsApp, USD pricing only

[Global] Zola

Price	Free (bundled with wedding website)
Strength	All-in-one suite: registry + website + invitations, 1000+ designs
Gap	US-centric, no adat templates, gift registry irrelevant for Indonesia

[Global] Canva

Price	Free / Pro \$15/month
Strength	Full design freedom, massive template library, familiar tool
Gap	Not wedding-specific, no RSVP or guest management, no WhatsApp share

[Global] Greenvelope

Price	\$20-\$159/event or \$99/year
Strength	Luxury positioning, envelope-opening animation
Gap	USD pricing, no Indonesia localization, no adat/Islamic templates

Indonesian Local Players

[ID] Undangan.online

Price	Rp 99K-249K (one-time per event)
Strength	Affordable, WhatsApp support, Indonesian language
Gap	Manual order process, not self-serve, limited template quality

[ID] Undangan.id

Price	Rp 150K-350K (one-time)
Strength	Admin panel, 50K+ couples served, multi-language support
Gap	Dated UI, no self-serve wizard, no live preview editor

[ID] Loveweb.id

Price	Rp 175K-450K (one-time)
Strength	Lottie animations, Next.js/Tailwind stack, personalized guest URLs
Gap	No live preview editor, no subscription tier, expensive exclusive tier

Our Competitive Advantages

We are the only platform combining: self-serve wizard with live phone preview + adat/Islamic templates + analytics dashboard + modern Next.js stack. No Indonesian competitor has all four simultaneously.

- Self-serve wizard with live phone preview (unique in Indonesian market)
- 30 templates across 5 ornament families including full adat coverage
- 75 color palettes - most customization options in the segment

- Analytics dashboard - only Paperless Post globally has this
- Modern stack: Next.js 14 + PostgreSQL + Docker (ready to scale)

Gaps to Close

- No WhatsApp blast - every local competitor has this (Phase 2 priority)
- No Lottie animations - Loveweb.id differentiates on this (Phase 3)
- No IDR payment gateway - cannot monetize yet (Phase 1 BLOCKER)
- No plan enforcement - all users get same features regardless of tier (Phase 1)

5. Business Model Options

Option A - One-Time Per-Event Payment (Recommended Primary)

Customer pays once per wedding event. Access valid 6-24 months by tier.

Starter Rp 99.000

- 10 templates, RSVP, wishes, gallery, maps, music
- 6 months active

Standard Rp 179.000

- 30 templates + all Starter features
- Countdown, analytics, custom slug
- 1 year active

Premium Rp 299.000

- All templates + all features
- Custom domain, WhatsApp blast, full analytics
- Live streaming, 2 years active

Best for market entry. Matches local competitor pricing. Lowest friction to first purchase.

Option B - Subscription SaaS (B2B / Wedding Organizer Tier)

- Personal - Rp 49K/bln: 1 active invitation, basic templates
- Pro - Rp 149K/bln: 5 active invitations, all templates, analytics
- Business - Rp 499K/bln: Unlimited invitations, white-label, API access

Add as B2B tier for Wedding Organizers in Phase 3 only. Hard sell for individual couples.

Option C - Freemium Lead Generation

- Free tier: 3 basic templates, platform watermark, max 50 RSVP guests, 3 months active
- Upsell to paid tiers to remove watermark and unlock all features
- Watermark on free invitations = organic brand exposure to all guests

Option D - A La Carte Add-Ons (Post-Purchase Upsells)

- Custom domain: +Rp 50.000
- WhatsApp blast up to 500 contacts: +Rp 75.000
- Live streaming embed: +Rp 50.000
- Premium animation pack: +Rp 49.000
- Extended active period +1 year: +Rp 49.000
- QR code for printed card: +Rp 25.000

Recommended Stack

Primary: One-time per-event (Option A) at Rp 99K / 179K / 299K | Virality: Freemium with watermark | ARPU: A la carte add-ons post-purchase | B2B Phase 3: Monthly subscription for

6. Recommended Roadmap

Phase 1 - Production Hardening

2-3 weeks

- Fix CORS wildcard - lock to NEXT_PUBLIC_FRONTEND_URL (security critical)
- Lock GET /api/rsvp/:id behind auth middleware - guest data currently exposed
- Move hardcoded EC2 IP to environment variable
- Add input sanitization on wishes/RSVP fields (XSS prevention)
- Set up daily database backups (pg_dump cron to S3 or local)
- Implement plan enforcement: feature gating tied to users.plan column
- Integrate Midtrans or Xendit payment gateway (revenue blocker)
- Add uptime monitoring with Telegram alert on downtime

Phase 2 - Core Feature Completion

3-4 weeks

- WhatsApp blast via Fonnte/Wablas (Indonesian WA API providers)
- Personalized WA share links with guest name pre-filled via ?to= token
- Guest import via CSV upload
- Job queue (Bull + Redis) for scheduled reminders: H-7, H-3, H-1, Hari-H
- Invitation duplicate/copy feature
- Waze + Google Maps dual navigation button
- QR code generator for printed invitation cards
- Multi-language toggle (ID/EN) on public invitation page

Phase 3 - Premium Experience

4-6 weeks

- Lottie animations for section transitions
- SVG ornament system: 16+ ornaments per section per template
- Clip-mask section transitions
- Love story carousel with timeline component
- Gift registry UI (bank transfer + GoPay/OVO QR)
- AI vow/caption generator based on couple story input
- Complete Rumah Gadang template with authentic gonjong rooflines
- 10 new templates: Betawi, Batak, Javanese Keraton, Sundanese, modern minimalist

Phase 4 - Growth & Scale

Ongoing

- Static pre-render for public invitation pages (Next.js SSG/ISR)
- OG image generation per invitation for social sharing previews
- SEO: target keywords "undangan digital pernikahan", "undangan online gratis"
- WO account type: manage multiple client invitations from one dashboard
- White-label option (remove platform branding, add custom logo)
- Affiliate/reseller program
- React Native companion app for real-time RSVP monitoring

7. Technical Debt to Address

Priority order before public launch:

CRITICAL	CORS wildcard - origin: "*" must be removed before any public launch
CRITICAL	RSVP endpoint publicly accessible - no auth, guest data exposed
HIGH	Hardcoded EC2 IP in domains route - blocks domain migration
HIGH	No plan enforcement - all users access same features
HIGH	No payment flow - platform cannot generate any revenue
MEDIUM	No database backup strategy - single point of failure on Postgres
MEDIUM	JWT stored in-memory only - lost on page refresh
LOW	No rate limiting on wishes endpoint - spam vector

8. Non-Functional Requirements

Performance

- Lighthouse mobile score > 85
- First Contentful Paint < 1.5s
- Time to Interactive < 3s on 4G

Security

- OWASP Top 10 compliance before launch
- All file uploads MIME-type validated
- JWT expiry 24h for production (currently 7 days)
- No secrets hardcoded in source or Docker images

Scalability

- Stateless backend for horizontal scaling
- Uploads to S3/Cloudflare R2 before 1000+ users
- CDN for static assets and ornament images

Availability

- 99.9% uptime SLA
- Public invitation pages load even if backend is down (SSG)
- Graceful degradation on all error states

9. Open Questions

1. Domain name?

e.g. undanganku.id, undangan.ai, lovelink.id

2. Payment
