

Digital Wedding Invitation

SaaS Platform

Product Requirements Document

Version	1.0
Date	July 05, 2026
Author	Fazrial
Status	Draft - Internal
Platform	Web SaaS (Indonesia-first)

This document defines the product vision, competitive landscape, business model options, and phased roadmap for transforming the existing Digital Wedding Invitation prototype into a production-ready SaaS platform targeting the Indonesian market.

TABLE OF CONTENTS

- 1. Executive Summary
- 2. Problem Statement
- 3. Goals & Success Metrics
- 4. Competitor Analysis
- 5. Business Model Options
- 6. Recommended Roadmap
- 7. Technical Debt
- 8. Non-Functional Requirements
- 9. Open Questions

1. Executive Summary

A web-based SaaS platform for creating, customizing, and sharing beautiful digital wedding invitations. Targeting the Indonesian market primarily, with potential Southeast Asian expansion. Differentiates through deep cultural template coverage (adat/traditional styles), premium animations, WhatsApp-native sharing, and affordable tiered IDR pricing.

Market Opportunity

- Global online invitation market: \$1.2B (2023) -> \$2.1B by 2030 (CAGR 8.3%)
- Indonesia estimated market potential: Rp 500 billion (2025)
- Smartphone penetration 77% + eco-conscious couples driving digital shift
- WhatsApp is the primary sharing channel - no global competitor supports it natively

2. Problem Statement

Indonesian couples want beautiful, shareable digital invitations but face:

- Generic global platforms (Canva, Paperless Post) with no Indonesian/adat templates
- Local competitors with limited template quality and no self-serve customization wizard
- High cost for custom-built invitations (Rp 500K-2M via freelancers)
- Poor mobile experience - but 70%+ of Indonesian users are mobile-first
- No WhatsApp-native sharing workflow (primary communications channel in Indonesia)

3. Goals & Success Metrics

Business Goals

- 1,000 paying invitations within 6 months of launch
- Rp 50M Monthly Recurring Revenue within 12 months
- 70%+ mobile traffic (mobile-first market)
- Time to first published invitation: < 10 minutes
- RSVP open rate: > 60% (vs email industry average ~25%)
- Net Promoter Score: > 50
- 99.9% uptime during active wedding invitation periods
- Page load < 2s on 4G mobile connection
- Zero critical security vulnerabilities at launch

4. Competitor Analysis

Global Players

Global Paperless Post

Price: \$0 free + \$8-\$75 coin packs / \$150/year unlimited

Strengths:

Global Zola

Price: Free (bundled with wedding website)

Strengths:

Global Canva

Price: Free / Pro \$15/month

Strengths:

Global Greenvelope

Price: \$20-\$159/event or \$99/year

Strengths:

Indonesian Local Players

ID Undangan.online

Price: Rp 99K-249K (one-time per event)

Strengths:

ID Undangan.id

Price: Rp 150K-350K (one-time)

Strengths:

ID Loveweb.id

Price: Rp 175K-450K (one-time)

Strengths:

Our Competitive Advantages

We are the only platform combining: self-serve wizard with live phone preview + adat/Islamic templates + analytics dashboard + modern Next.js stack. No competitor has all four simultaneously.

- Self-serve wizard with live phone preview (unique in Indonesian market)
- 30 templates across 5 ornament families including adat/traditional coverage
- 75 color palettes - most customization options in the segment
- Analytics dashboard - only Paperless Post (global) has this feature
- Modern stack: Next.js 14 + PostgreSQL + Docker (easy to scale)

- No WhatsApp blast - every local competitor has this (Phase 2 priority)
- No Lottie animations - Loveweb.id differentiates here (Phase 3)

Gaps to C

- No IDR payment gateway - currently cannot monetize (Phase 1 BLOCKER)
- No plan enforcement - all users access same features regardless of tier (Phase 1)

5. Business Model Options

Option A - One-Time Per-Event Payment (Recommended Primary)

Customer pays once per wedding event. Access valid for 6-24 months depending on tier.

Starter - Rp 99.000

- 10 templates, RSVP, wishes, gallery, maps, music
- 6 months active

Standard - Rp 179.000

- 30 templates, all Starter features
- Countdown, basic analytics, custom slug
- 1 year active

Premium - Rp 299.000

- All templates + all features
- Custom domain, WhatsApp blast, full analytics
- Live streaming embed, 2 years active

Best for initial market entry. Matches local competitor pricing. Lowest friction to first purchase.

Option B - Subscription SaaS (B2B / Wedding Organizer Tier)

- Personal - Rp 49K/bln: 1 active invitation, basic templates
- Pro - Rp 149K/bln: 5 active invitations, all templates, analytics
- Business - Rp 499K/bln: Unlimited invitations, white-label, API access

Add as B2B tier for Wedding Organizers (WOs) only in Phase 3. Hard sell for individual couples who have a one-time need.

Option C - Freemium + Upgrade

- Free tier: 3 basic templates, platform watermark, RSVP max 50 guests, 3 months active
- Upsell to paid tiers to remove watermark and unlock features
- Watermark on free invitations = organic brand exposure as guests see the platform

Include free tier as lead generation layer on top of Option A. Watermark = organic viral marketing.

Option D - A La Carte Add-Ons

- Custom domain: +Rp 50.000
- WhatsApp blast (up to 500 contacts): +Rp 75.000
- Live streaming embed: +Rp 50.000
- Premium animation pack: +Rp 49.000
- Extended active period (+1 year): +Rp 49.000
- QR code for printed invitation card: +Rp 25.000

Layer as post-purchase upsells to increase ARPU without complicating the main pricing page.

Recommended Model Stack

- Primary: One-time per-event (Option A) - Rp 99K / 179K / 299K
- Virality: Freemium free tier with platform watermark

- Upsell: A la carte add-ons post-purchase to increase ARPU
- B2B (Phase 3): Monthly subscription for Wedding Organizers

6. Recommended Roadmap

Phase 1 - Production Hardening

2-3 weeks

- Fix CORS wildcard - remove origin: "*", lock to NEXT_PUBLIC_FRONTEND_URL
- Lock GET /api/rsvp/:id behind auth middleware (guest data currently exposed)
- Move hardcoded EC2 IP in domains route to environment variable
- Add input sanitization on wishes/RSVP fields (XSS prevention)
- Set up daily database backups (pg_dump cron to S3 or local)
- Implement plan enforcement: feature gating tied to users.plan column
- Integrate Midtrans or Xendit payment gateway (revenue blocker)
- Add uptime monitoring with Telegram alert on downtime

Phase 2 - Core Feature Completion

3-4 weeks

- WhatsApp blast via Fonnte/Wablas (Indonesian WA API providers)
- Personalized WA share links with guest name pre-filled (?to= token)
- Guest import via CSV upload
- Job queue (Bull + Redis) for scheduled reminders (H-7, H-3, H-1, Hari-H)
- Invitation duplicate/copy feature
- Waze + Google Maps dual navigation button
- QR code generator for printed invitation cards
- Multi-language toggle (ID/EN) on public invitation page

Phase 3 - Premium Experience

4-6 weeks

- Lottie animations for section transitions
- SVG ornament system: 16+ ornaments per section per template
- Clip-mask section transitions (currently in backlog)
- Love story carousel with timeline component
- Gift registry UI (bank transfer + GoPay/OVO QR)
- AI vow/caption generator based on couple story input
- Complete Rumah Gadang template (authentic gonjong rooflines)
- 10 new templates: Betawi, Batak, Javanese Keraton, Sundanese, modern minimalist

Phase 4 - Growth & Scale

Ongoing

- Static pre-render for public invitation pages (Next.js SSG/ISR)
- OG image generation per invitation for social sharing previews
- SEO optimization (target: "undangan digital pernikahan", "undangan online gratis")
- WO account type: manage multiple client invitations
- White-label option (remove platform branding, custom logo)
- Affiliate/reseller program
- React Native companion app for real-time RSVP monitoring

7. Technical Debt to Address

Priority order before public launch:

CRITICAL	CORS wildcard - remove origin: "*" immediately
CRITICAL	RSVP endpoint auth - guest data publicly accessible without auth
HIGH	Hardcoded EC2 IP in domains route - blocks domain migration
HIGH	No plan enforcement - all users access same features
HIGH	No payment flow - platform cannot generate revenue
MEDIUM	No database backup strategy - single point of failure
MEDIUM	JWT stored in-memory only - lost on page refresh
LOW	No rate limiting on wishes endpoint - spam vector

8. Non-Functional Requirements

Performance

- Lighthouse mobile score > 85
- First Contentful Paint < 1.5s
- Time to Interactive < 3s on 4G connection

Security

- OWASP Top 10 compliance before public launch
- All file uploads MIME-type validated strictly
- JWT expiry reduced to 24h for production (currently 7 days)
- No secrets hardcoded in source code or Docker images

Scalability

- Stateless backend (no local session state) for horizontal scaling
- File uploads migrated to S3/Cloudflare R2 before >1,000 active users
- CDN for static assets and ornament images

Availability

- 99.9% uptime SLA target
- Public invitation pages load even if backend is down (Next.js SSG)
- Graceful degradation on all user-facing error states

9. Open Questions

1. Domain name?

e.g. undanganku.id, undangan.ai, lovelink.id

2. Payment

Out of Scope (v1): Physical/printed invitation ordering, video invitations, full wedding website

builder, vendor marketplace, multi-event per invitation.
